COVID-19 Active Infection (SARS-CoV-2 RNA, Qualitative NAAT (Observed Self-Collection))

Result

▲ COVID-19 Active Infection (SARS-CoV-2 RNA, QL NAAT)

DETECTED

NOT

Desired Result: DETECTED

A Detected result is considered a positive test result for COVID-19. This indicates that RNA from SARS-CoV-2 (formerly 2019-nCoV) was detected, and the patient is infected with the virus and presumed to be contagious. If requested by public health authority, specimen will be sent for additional testing.

Please review the "Fact Sheets" and FDA authorized labeling available for health care providers and patients using the following websites:
<https://www.questdiagnostics.com/home/Covid-19/HCP/NAAT/fact-sheet2>
<https://www.questdiagnostics.com/home/Covid-19/Patients/NAAT/fact-sheet2>

This test has been authorized by the FDA under an Emergency Use Authorization (EUA) for use by authorized laboratories.

Due to the current public health emergency, Quest Diagnostics is receiving a high volume of samples from a wide variety of swabs and media for COVID-19 testing. In order to serve patients during this public health crisis, samples from appropriate clinical sources are being tested. Negative test results derived from specimens received in non-commercially manufactured viral collection and transport media, or in media and sample collection kits not yet authorized by FDA for COVID-19 testing should be cautiously evaluated and the patient potentially subjected to extra precautions such as additional clinical monitoring, including collection of an additional specimen.

Methodology: Nucleic Acid Amplification Test (NAAT) includes RT-PCR or TMA

Additional information about COVID-19 can be found at the Quest Diagnostics website:
www.QuestDiagnostics.com/Covid19.
